Statistical Data Visualization With Seaborn

The Python visualization library **Seaborn** is based on matplotlib and provides a high-level interface for drawing attractive statistical graphics.

Make use of the following aliases to import the libraries:

```
>>> import matplotlib.pyplot as plt
>>> import seaborn as sns
```

The basic steps to creating plots with Seaborn are:

- 1. Prepare some data
- 2. Control figure aesthetics
- 3. Plot with Seaborn
- 4. Further customize your plot

```
>>> import matplotlib.pyplot as plt
>>> import seaborn as sns
>>> tips = sns.load dataset("tips")
>>> sns.set style("whitegrid") < Step 2
>>> g = sns.lmplot(x="tip", v="total bill",
                    data=tips,
                   aspect=2)
>>> g = (g.set axis labels("Tip", "Total bill(USD)").
set(xlim=(0,10),vlim=(0,100)))
>>> plt.title("title")
>>> plt.show(g)
```

Data

Also see Lists, NumPy & Pandas

```
>>> import pandas as pd
>>> import numpy as np
>>> uniform data = np.random.rand(10, 12)
>>> data = pd.DataFrame({'x':np.arange(1,101),
                         'y':np.random.normal(0,4,100)})
```

Seaborn also offers built-in data sets:

Figure Aesthetics

```
>>> titanic = sns.load dataset("titanic")
>>> iris = sns.load dataset("iris")
```

Axis Grids

```
>>> g = sns.FacetGrid(titanic,
                      col="survived"
                      row="sex")
>>> g = g.map(plt.hist, "age")
>>> sns.factorplot(x="pclass",
                   y="survived".
                   hue="sex",
                   data=titanic)
>>> sns.lmplot(x="sepal width",
               y="sepal length",
               hue="species",
```

Subplot grid for plotting conditional relationships

Draw a categorical plot onto a Facetgrid

Plot data and regression model fits across a FacetGrid

```
>>> h = sns.PairGrid(iris)
                                        Subplot grid for plotting pairwise
>>> h = h.map(plt.scatter)
                                        relationships
                                        Plot pairwise bivariate distributions
>>> sns.pairplot(iris)
                                        Grid for bivariate plot with marginal
>>> i = sns.JointGrid(x="x",
                                        univariate plots
                       y="y",
                        data=data)
>>> i = i.plot(sns.regplot,
                sns distplot)
                                        Plot bivariate distribution
>>> sns.jointplot("sepal length",
                    "sepal width",
                    data=iris.
                    kind='kde')
```

Categorical Plots

```
Scatterplot
>>> sns.stripplot(x="species",
                  y="petal length",
                  data=iris)
>>> sns.swarmplot(x="species",
                  y="petal length",
```

data=iris)

data=iris)

>>> sns.barplot(x="sex", v="survived", hue="class", data=titanic)

Count Plot

Bar Chart

>>> sns.countplot(x="deck", data=titanic. palette="Greens d")

Point Plot

>>> sns.pointplot(x="class", y="survived", hue="sex". data=titanic. palette={"male":"g", "female": "m" },

markers=["^","o"],

linestyles=["-","--"])

Boxplot

>>> sns.boxplot(x="alive", v="age". hue="adult male", data=titanic)

>>> sns.boxplot(data=iris,orient="h") Violinplot

>>> sns.violinplot(x="age", v="sex", hue="survived", data=titanic)

Scatterplot with one categorical variable

Categorical scatterplot with non-overlapping points

Show point estimates and confidence intervals with scatterplot glyphs

Show count of observations

Show point estimates and confidence intervals as rectangular bars

Boxplot

Boxplot with wide-form data

Violin plot

Regression Plots

```
>>> sns.regplot(x="sepal_width",
                y="sepal length",
                data=iris,
                ax=ax)
```

Plot data and a linear regression

Distribution Plots

```
>>> plot = sns.distplot(data.y,
                         kde=F
                         color="b"
```

Plot univariate distribution

Matrix Plots

```
>>> sns.heatmap(uniform data,vmin=0,vmax=1)
```

Further Customizations

Also see Matplotlib

Axisarid Obiects

```
>>> g.despine(left=True)
>>> g.set ylabels("Survived")
>>> g.set_xticklabels(rotation=45) Set the tick labels for x
>>> g.set axis labels("Survived",
                        "Sex")
>>> h.set(xlim=(0,5),
          vlim = (0, 5),
```

xticks=[0,2.5,5],

vticks=[0,2.5,51)

Remove left spine Set the labels of the y-axis Set the axis labels

Set the limit and ticks of the x-and y-axis

Plot

>>>	plt.title("A Title")
>>>	plt.ylabel("Survived")
>>>	plt.xlabel("Sex")
>>>	plt.ylim(0,100)
>>>	plt.xlim(0,10)
>>>	plt.setp(ax,yticks=[0,5])
>>>	plt.tight_layout()

Add plot title Adjust the label of the v-axis

Adjust the label of the x-axis Adjust the limits of the v-axis Adjust the limits of the x-axis Adjust a plot property Adjust subplot params

Show or Save Plot

```
>>> plt.show()
>>> plt.savefig("foo.png")
>>> plt.savefig("foo.png",
               transparent=True)
```

Show the plot Save the plot as a figure Save transparent figure

Close & Clear

DataCamp Learn Python for Data Science Interactive

>>> f, ax = plt.subplots(figsize=(5,6)) Create a figure and one subplot

Seaborn styles

>>>	sns.set()
>>>	<pre>sns.set_style("whitegrid")</pre>
>>>	sns.set style("ticks",
	{"xtick.major.size":8,
	"ytick.major.size":8}
>>>	<pre>sns.axes_style("whitegrid")</pre>
	-

(Re)set the seaborn default Set the matplotlib parameters Set the matplotlib parameters

Return a dict of params or use with with to temporarily set the style

Context Functions

<pre>>>> sns.set_context("talk") >>> sns.set_context("notebook",</pre>	Set context to "talk" Set context to "notebook" scale font elements and override param mapping
--	--

Cold	Color Palette				
	sns.set_palette("husl",3)	Define the color palette			
	<pre>sns.color_palette("husl") flatui = ["#9b59b6","#3498db",</pre>	Use with with to temporarily set palette "#95a5a6", "#e74c3c", "#34495e", "#2ecc71"]			
	sns.set_palette(flatui)	Set your own color palette
