NumPv

The **NumPy** library is the core library for scientific computing in Python. It provides a high-performance multidimensional array object, and tools for working with these arrays.

Use the following import convention:

>>> import numpy as np NumPy Arrays

Creating Arrays

```
>>> a = np.array([1,2,3])
>>> b = np.array([(1.5,2,3), (4,5,6)], dtype = float)
>>> c = np.array([(1.5,2,3), (4,5,6)], [(3,2,1), (4,5,6)]],
dtype = float)
```

Initial Placeholders

>>> np.zeros((3,4)) >>> np.ones((2,3,4),dtype=np.int16) >>> d = np.arange(10,25,5)	Create an array of evenly
>>> np.linspace(0,2,9)	spaced values (step value) Create an array of evenly spaced values (number of samples)
>>> e = np.full((2,2),7) >>> f = np.eye(2)	Create a constant array Create a 2X2 identity matrix
>>> r = np.eye(2) >>> np.random.random((2,2)) >>> np.empty((3,2))	Create a 2A2 identity matrix Create an array with random value Create an empty array

1/0

Saving & Loading On Disk

```
>>> np.save('my_array', a)
>>> np.savez('array.npz', a, b)
>>> np.load('my_array.npy')
```

Saving & Loading Text Files

```
>>> np.loadtxt("myfile.txt")
>>> np.genfromtxt("my_file.csv", delimiter=',')
>>> np.savetxt("myarray.txt", a, delimiter=" ")
```

Data Types

-	/ I	
	>>> np.int64	Signed 64-bit integer types
	>>> np.float32	Standard double-precision floating point
	>>> np.complex	Complex numbers represented by 128 floats
	>>> np.bool	Boolean type storing TRUE and FALSE values
	>>> np.object	Python object type
	>>> np.string_	Fixed-length string type
	>>> np.unicode	Fixed-length unicode type

Inspecting Your Array

>>> a.shape	Array dimensions
>>> len(a)	Length of array
>>> b.ndim	Number of array dimensions
>>> e.size	Number of array elements
>>> b.dtype	Data type of array elements
>>> b.dtype.name	Name of data type
>>> b.astype(int)	Convert an array to a different type

Asking For Help

>>> np.info(np.ndarray.dtype)

Array Mathematics

Arithmetic Operations

>>> g = a - b array([[-0.5, 0., 0.],	Subtraction
[-3. , -3. , -3.]]) >>> np.subtract(a,b) >>> b + a	Subtraction Addition
array([[2.5, 4., 6.], [5., 7., 9.]])	
>>> np.add(b,a)	Addition
>>> a / b array([[0.66666667, 1. , 1.], [0.25 , 0.4 , 0.5]]	Division
>>> np.divide(a,b)	Division
>>> a * b array([[1.5, 4., 9.], [4., 10., 18.]])	Multiplication
>>> np.multiply(a,b)	Multiplication
>>> np.exp(b)	Exponentiation
>>> np.sqrt(b)	Square root
>>> np.sin(a)	Print sines of an array
>>> np.cos(b)	Element-wise cosine
>>> np.log(a)	Element-wise natural logarithr
>>> e.dot(f)	Dot product
array([[7., 7.],	
[7., 7.]])	

Comparison

<pre>>>> a == b array([[False, True, True],</pre>	Element-wise comparison
[False, False, False]], dtype=bool)	
>>> a < 2	Element-wise comparison
array([True, False, False], dtype=bool)	
>>> np.array_equal(a, b)	Array-wise comparison

Aggregate Functions

>>> a.sum()	Array-wise sum
>>> a.min()	Array-wise minimum value
>>> b.max(axis=0)	Maximum value of an array row
>>> b.cumsum(axis=1)	Cumulative sum of the elements
>>> a.mean()	Mean
>>> b.median()	Median
>>> a.corrcoef()	Correlation coefficient
>>> np.std(b)	Standard deviation

Copying Arrays

>>> np.copy(a)	Create a view of the array with the same data Create a copy of the array
>>> h = a.copy()	Create a deep copy of the array

Sorting Arrays

>>> a.sort()	Sort an array
>>> c.sort(axis=0)	Sort the elements of an array's axis

Subsetting, Slicing, Indexing

Also see **List**:

Subsetting

Slicing

```
>>> a[0:2]
array([1, 2])
>>> b[0:2,1]
array([2., 5.])
```

>>> b[:1] array([[1.5, 2., 3.]])

>>> c[1,...]
array([[[3., 2., 1.],
[4., 5., 6.]]])
>>> a[::-1]
array([3, 2, 1])

Boolean Indexing >>> a [a<2]

Select the element at the 2nd index

Select the element at row 1 column 2 (equivalent to b[1][2])

Select items at index 0 and 1

Select items at rows 0 and 1 in column 1

Select all items at row 0 (equivalent to b[0:1, :])
Same as [1,:,:]

Reversed array a

Select elements from a less than 2

Select elements (1,0), (0,1), (1,2) and (0,0)

Select a subset of the matrix's rows and columns

Array Manipulation

Transposing Array

Changing Array Shape

>>> b.ravel() >>> g.reshape(3,-2)

Adding/Removing Elements

>>> h.resize((2,6))
>>> np.append(h,g)
>>> np.insert(a, 1, 5)
>>> np.delete(a,[1])

Combining Arrays

>>> np.concatenate((a,d),axis=0)

Splitting Arrays

Permute array dimensions Permute array dimensions

Flatten the array Reshape, but don't change data

Return a new array with shape (2,6) Append items to an array Insert items in an array Delete items from an array

Concatenate arrays

Stack arrays vertically (row-wise)

Stack arrays vertically (row-wise) Stack arrays horizontally (column-wise)

Create stacked column-wise arrays

Create stacked column-wise arrays

Split the array horizontally at the 3rd index

Split the array vertically at the 2nd index
